

Site Management Safety Training Scheme (SMSTS)

Who is the course for?

The Site Management Safety Training Scheme is for anyone who manages any aspect of construction work. Site managers, property developers and senior foremen in high risk trades will all benefit from the knowledge we can give and what they will learn from each other.

Why must I attend?

This course is a requirement of UKCG training standards and is cited in the Construction (Design & Management) Regulations as the appropriate training level for site management.

Course Benefits

Delegates will feel confident in their responsibilities for running a safe site and will gain an excellent working knowledge of legal requirements that may have been a mystery for years.

The content focuses on the health issues faced by those who work in construction as well as the safety challenges that we face on site every day. This course contains a wide variety of subject matter but also allows enough time to understand the root causes of our construction safety problems, as well as how to solve them.

The course is packed full of interaction and engagement in order to give the best learning experience to our delegates.

Assessment

Delegates are assessed through daily group and individual exercises which will challenge understanding and the ability to implement what has been learned, with a multiple choice examination at the end of the course.
