IOSH Working Safely

Who is the course for?

IOSH Working Safely is for everyone who may be exposed to hazards during their working day. These may include physical hazards such as slips, trips and falls, exposure to chemicals or longer term hazards such as noise, vibration and stress.

The Essentials

Training for your workforce is all about personal responsibility. Once employers have provided safe ways of working, it is over to your workers to use them. Managers and Directors don't tend to get hurt at work - we need to train those that do…

The focus of this engaging, interactive course is on developing skills to identify hazards and understand risk. Once we understand these principles, we can apply them to any workplace situation.

The IOSH way...

IOSH Working Safely is a one-day course offering all the basics in a high impact interactive package.

*   Fantastic IOSH materials created exclusively for the course

*   A presentation that's designed to be fun and get people fully involved and interested

Assessment

Delegates must pass 3 hazard identification tests involving different workplace scenarios in addition to a multiple choice test.
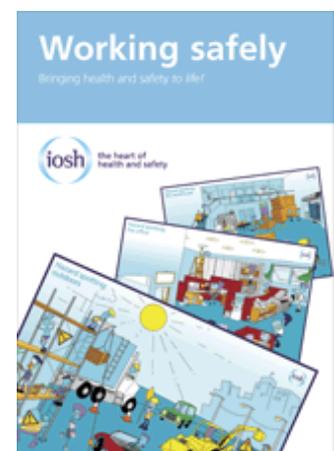

Course Duration

1 day

Refreshers

Renewal of your course after 5 years is advised

Publications

Delegates will be issued with a copy of the IOSH Working Safely Workbook to use and take home

Working safely
Bringing health and safety to life!

IOSH Working Safely
